state of affairs, and he deserves the support of his brother Guardians and of the public in securing some desirable change.

THE HARTLEY RELIEF FUND.

Many years have elapsed since the sad accident occurred at Hartley Colliery. It was on the 16th of January, 1862, that the fatal beam fell into the shaft, carrying death to 204 men and lads, and bringing misery and sorrow untold to many a Northern home. The sympathy that was expressed throughout the kingdom for the bereaved was spontaneous and practical. One is reminded of all this by the cash statement and balance sheet of the Percy Colliery Relief Fund, which has just been issued for the year ending August 31, 1892. It is, as usual, clear and concise, and shows that during the year the allowance of relief to widows, adults, and others has amounted to £633 4s. 6d.; for medical attendance £20 10s. 6d. has been paid; and the allowance in respect of deaths has been £24. A fee of £12 11s. 6d. is set down as having been paid to Sir Horace Davy, Q.C., for his opinion as to the power of the committee of Percy Park scheme for the disposal of the ultimate surplus, and the other particulars given show that the balance of the fund is £24,391 2s. 1d. The number of widows remaining on the fund is 10, and the other adults surviving number 55, a total of 65. The accounts are audited and certified by Messrs. Holmes, Spence and Co., Arcade, and the statement as usual has been ably prepared by Mr. John Atkinson, of Grainger Street West, the secretary to the fund.

THE Y.M.C.A. GYMNASIUM.

In the "Young Men's Magazine" for the current month there is an interesting article, taken from "Boys," on music, and in the Northumberland Hall, High Friar Street, somewhat the members of the Young M.C.A. are twice a week actively engaged in adapting themselves to the skilled performance of athletic exercises. "All head and no muscle" has always been deemed an undesirable thing at the Northumberland Hall, and there have for years formed a portion of the instruction given, and as the gymnasium above the institute has proved inconvenient for the purpose the Northumberland Hall has been rented. In it on Tuesday and Friday evenings there is regularly to be seen now a band of small young fellows learning the evolutions of the horizontal bar, the art of manipulating sword sticks or Indian clubs, or in going through other exercises of a healthy and muscle-developing character. Thus there are Messrs. Lebliqne and Son, and the excellence of the lessons given, it is stated, speedily demonstrated by the proficiency the members attain after a few lessons. No better place than the Northumberland Hall could perhaps be found in Newcastle for such a purpose. There is splendid accommodation in the way of floor space, and there would be no difficulty in at least a hundred young men being taught at once in such a building. At present the class consists of forty to twenty-five, but the committee are anxious to witness an accession to the number, and will be glad to welcome any respectable young men amongst them. The reminder issued by Mr. Henry Chapman, the secretary of the institute, of the engagements for "Dark Evenings" contains many attractive features, but to the young man who desires to put on girth, to be smart and lithe and healthy, the gymnasium ought to offer powerful attractions.

THE CUMBERLAND CYCLE CHALLENGE.

They go in for more athletic indoor exercises in Gateshead than they seem to do in Newcastle. There the horizontal bar flourishes, and the feats that constitute the main features of a night's feats in physical exercise mount with more approval. There is one class in the Alexandra Road vicinity which boasts more than a hundred members, and there is another powerful class in a neighboring street. Over both these organisations Messrs. Lebliqne act as tutors, and the proficiency attained is such that there is an intention this year of forming a company of northern athletes to compete for the national trophy offered to gymnastic clubs. The trophy is a valuable one, and carries honour with it to any district that becomes its possessor. It is believed that a fine corps of athletes can be secured from Gateshead, and there is really no reason why Newcastle should not be able also to compete creditably for the honour if young men and fellows would buckle to and take advantage of the physical training that is offered to them at such a place as the Northumberland Hall.

AN ANTIQUARIAN TREAT.

Just as the late Dr. Bruce was the historian of the Roman Wall, so Mr. Gibson, of Hexham, may be said to be its artist. Mr. Gibson has this year spent many days on the line of the Vallum and the Wall, and the result of his observations and travels was given to the members of the Newcastle Society of Antiquaries in the Castle last week. The lecture was a pleasant break in upon the usual proceedings of the society. A screen was fitted up in the ancient hall where the lecture took place, and instant succession of photographic views were shown. These were handsome representations of North-country scenery, and they were accompanied by chatty remarks that abounded with information relating to both the Vallum and the Wall. There will be certainly been no feature in the society's programme for a long time past that has afforded so much entertainment to the members generally as Mr. Gibson's introduction, and in the thanks at the close the speaker was hearty indeed. Mr. Gibson's remarks were followed by a learned paper on St. Cuthbert, by Mr. Bates, and as this in its turn was illustrated by maps given with lantern effects, the general information conveyed was readily understood. The lecture everywhere is growing in popularity, and it will be no surprise, after last week's experience, if it is more frequently utilised as such gatherings.

THE NEW FACTORY GIRLS' CLUB.

"Oh, teacher, I think I should die if I had not the club to go to." This is an expression found in the annual report of the Girls' Club, City Road, Newcastle, and read at the annual meeting of that institution on Wednesday. Nothing more than this remark could so thoroughly indicate the appreciation with which the poor girls of the east end look upon the club which they now specially call their own. The premises are comfortable, bright and cheerful. There are kind-hearted ladies always to the fore to instruct the members in reading, writing, and useful employments, and the means of recreation recently added to the programme have contributed to the enjoyment. So great indeed has been the increase in attendance that the rooms are beginning to prove too small for the purpose, and the committee are anxious to extend the premises by the purchase of neighbouring property. The movement in this direction will probably shortly be made when the president (Miss Pease), the hon. treasurer (Miss Cullen), and the hon. secretary (Miss Moffitt) will deserve a hearty response to the appeal that they will then make.

THE CONVALESCENT HOME AT TYNEMOUTH.

Few men who have been in the police force have made more friends in their time than ex-Superintendent Anderson, of the Prudhoe Street Division, Newcastle. His popularity among his comrades secured for him a handsome present for his wife and himself on his retirement from the force a short while ago; and the esteem which was felt for him by the public found expression the other evening in a room connected with the People's Palace, when he was presented by Ald. Newton, on behalf of a large number of subscribers, with a gold watch, a purse of gold, and a pair of diamond ear-rings for his wife. Always courteous to the public, active in the discharge of his duties, and thoughtful to the unfortunate, Supt. Anderson has, during his 28 years of service, fairly earned the honours he has recently received. ELFIN.

THE UGANDA QUESTION.

A public meeting of the inhabitants of Durham, convened by the Mayor (Mr. D. Hall), on Friday, to protest against annexation was held on Wednesday night in Durham Town Hall, to protest against the proposal to evacuate Uganda. The Mayor occupied the chair, and there also present were Mr. M. Fowler, M.P., the Dean of Durham (Dr. Lake), Canon Tristram, Rev. H. E. Fox, Professor Ker, Professor Jevons, and others. There was a crowded attendance. Letters regretting their absence had been received from Lord Wharncliffe, Mr. Jos. Cowen, Mr. Watkins, Archdeacon Hamilton, Canon Body, and others.—The Dean of Durham proposed the following resolution:—

That this meeting of citizens and inhabitants of the City of Durham cordially acknowledges the sympathetic attitude of Lord Rosebery, when referring that the abandonment of Uganda would be a violation of that policy, so articulated to unite all the good which has been done by the introduction of Christianity and civilization, and the repression of the slave trade in that region, and earnestly entreats her Majesty's Government to carry out the terms agreed upon by the Blagdon Treaty, and especially to maintain the engagements entered into with the King and people of Uganda.

Mr. MICAH CHAMBERS seconded, and Rev. Dr. Plummer supported the resolution, which was carried unanimously. It was agreed to forward a copy of the resolution to the Secretary of State for Foreign Affairs, and the meeting concluded with a vote of thanks to the chairman.

SOCIAL.

SUCCESSFUL CHEMISTS.—At the recent examinations of the Pharmaceutical Society held in Edinburgh, Messrs. Matthew Bell and Robert McClimpha, both late apprentices with Mawson, Swan, and Weddell, chemists, of this city, were successful in satisfying the Board of Examiners, and were declared qualified to be registered as chemists and druggists.

THE RAILWAY ACCIDENT IN YORKSHIRE.

OPENING OF THE INQUEST.

CLEARING AWAY THE WRECKAGE.

A representative of the *Chronicle* yesterday morning visited the scene of the disastrous collision which occurred on Wednesday morning, at Manor House siding, three miles north of Thirsk, between the south express and a goods train which was standing on the same line of rails. The number of deaths occasioned by the accident was set down at ten. Eight of the bodies were recovered, and there was also recovered a portion of a woman's body, which was believed, from the position in which it was found, to be that of Mrs. Mackenzie, the wife of Mr. Alexander Mackenzie, who was himself among the injured. There was also missing Miss McCulloch, sister of Mr. McCulloch, who was travelling with their niece to Gateshead. It was feared, however, that the bodies both of Miss McCulloch, there was the body of yet another lady under the mass of burning *debris*, and, as many asserted, the bodies also of two or three children who were travelling with her. Close inquiry, however, has tended to corroborate the story about the children, although it seems to be taken as a fact that both Miss McCulloch and another lady, unknown, were burnt in the wreck. There are also some portions of the remains of Mrs. Mackenzie, of whom it is feared that she is included in the list of those whose bodies were recovered, only the upper part was taken from the wrecked train. The medical opinion is that the remains recovered point to the possibility of more bodies being found in consumed in the fierce fire that followed the accident.

The scene yesterday morning was very different from that which greeted the gaze of visitors on Wednesday afternoon. When darkness closed in on Wednesday afternoon, the wreckage had been cleared away from only the down line, and the traffic, which is necessarily very great on the main artery between the south and the north, was maintained with no little difficulty and some danger on the down line—that is, the line upon which travel the trains coming from London to Newcastle. It was important that the other line should also be cleared, in order that the traffic might be restored to its normal condition. None but those who have seen the terrible results of a smash on the railway can realise what a Herculean task this is; and it was never on the North-Eastern system a heavier task than that which confronted the men at Manor House Siding. It is an easy matter enough to replace *in statu quo* an engine, or even a train, that has run off the rails. That can, by ingenious appliances, be done in an hour or two. But here the permanent way was strewn with masses of heavy wreckage for about a hundred yards. There were axles, and metal frameworks, and gas—cylinders, and rails that had been torn from their foundations, all mingled together in inextricable confusion—worse, rather, indeed, in a fashion, than made it a very difficult business to detach one portion from another. But it is wonderful what a body of willing workers with the powerful appliances of modern mechanism can do. Tendrons cranes pulled away at the wreckage, tearing the heap to pieces, until the permanent way was laid bare. The rails had been twisted into fantastic shapes, one length having assumed, as nearly as might be, the form of a letter S. The sleepers upon which the rails were replaced by others, which were fastened upon the sleepers temporarily, so that the traffic on the up line, upon which the accident happened, might be resumed. This was accomplished about half-past six on Wednesday night, when the first train that had passed South since the accident without shunting at Otterington on to the down line, was that which went through the siding about half-past nine o'clock. Meanwhile, the ordinary traffic was resumed with regularity, although all trains slowed up before reaching the scene of the accident, this precaution being rendered necessary not only by the possibility of obstruction in the neighbourhood, but also by the presence of the men who were still working in the vicinity. After the line had been cleared there were still great masses of wreckage on each side of the line. Most of it, however, was by the side of the up line. The engine was there, and beside it, under a heap of ruins, lay near the Manor House cabin, and a little to the north was another heap of carriages and mineral trucks. Both these heaps were burning furiously for a long time. It was beneath the engine and tender that the bodies of the unfortunate passengers who were still missing were supposed to be lying, but, as there was no hope whatever of recovering any of the remains in a shape that would be recognisable, the work was suspended until the wreckage should have sufficiently cooled to allow the workmen to get into the midst of it. The fire gradually burned itself out, having consumed every morsel of woodwork, and left nothing but the mass of fire-twisted iron, fit only for the scrap heap. Thus it was yesterday morning. There had been something picturesque about the engine and tender, lying prostrate across the hedge that divides the railroad from the neighbouring field, where they were enveloped by the fiercely burning flames; but now the mass was cold, and seared, and worthless-looking. The body of the engine was battered and bruised, the tender showed great scars in its side, and all the paint had been burnt off, leaving the metal red-rusted beneath. The heap of carriages lay in what was even in worse plight; and these, and the scattered portions on the side of the line, were in a state that was left of the handsome train of East Coast Joint Stock carriages that had left Edinburgh on Tuesday night. It was a charming morning, mild and pleasant as a May day; and the contrast between the bright face of nature, with its delicate tints, and this dreadful destruction of the handiwork of man, was striking and melancholy. The early morning brought numbers of visitors to the scene of the accident. Many walked from Thirsk, and others came by road in vehicles, and by evening trains, for at a long there was an almost continuous stream of vehicles conveying sightseers to and from the fateful spot. In all the country round about little else was spoken of but the disastrous affair. These people, away down in the heart of agricultural Yorkshire, find few topics beyond farming and parochial matters to interest them, and an occurrence such as that which has come so near will furnish them a topic for talk for years to come. But they are a kindly people, and there has been genuine sympathy expressed everywhere with the friends of the victims, as well as with those who are still in bodily pain as the result of the accident. Among the visitors yesterday morning were Sir George Wombwell and Lady Julia Wombwell, of Newburgh Priory, both of whom expressed their sorrow at the sad disaster that had happened so near their home.

After the up line had been cleared, the vans and crews which had been employed in the work were removed, but the workmen remained in the neighbourhood all night, and set to work first thing in the morning to make perfectly true and secure the rails upon the permanent way which had been destroyed. Simultaneously, the metal work having become sufficiently cool, two or three men were directed to take out the ashes from beneath the engine and tender. This was a grousome task and a painful one; for it was here that the human bodies had been consumed, and where any relics of the dead that had been spared by the flames might be expected to be found. Two men were to do the work, and they had to take the shovelfuls of each shovelful of refuse was watched with almost breathless interest by the people who gathered round. Some portions of the wreckage were still smouldering, and the men had to stand back from the sickening odour, as of charred flesh, that hung over the ruins. The ashes were thrown into a heap, and were carefully sifted, and anything that had evidently had a human connexion was taken out and preserved. It was clear enough now that some had been burned to ashes in the conflagration. Unpleasant as the search was, each succeeding discovery only served the more to chain to the spot those who witnessed it. Here and there the link of a human skeleton, a jaw bone with the teeth still fixed in it, and other osseous remains, were raked out and placed reverently in a heap. This was all that remained of some who had gone forth full of life and hope, and fearing no danger. It is scarcely necessary to say that the remains left no possibility of identification, and it is not at all likely that even medical judgment will be able to say whether the bones that were found belonged to a male or female. But there were many relics that may be easily identified, and that are sure to be treasured by relatives as mementos of the dead. There was a cameo brooch, in which, although the frame was almost completely destroyed, the sacred head was nearly perfect. There was a pair of *pince-nez*, with the melted glass still clinging to the frame. There was a penknife, whose ivory handle had been burnt off in flakes; and there was also the blade of another knife, still fastened to the steel casing of the handle. There was a razor without a handle, and there was also found near the engine a red bag containing a Sheffield razor in a clasp-case, and a shaving brush. Two tin plates, with the letters of the alphabet around the rims, had evidently been the playthings of a child. Several coins in copper and silver were found, no worse for the heat except that they were tarnished; but there was a quantity of white metal, presumably silver, which had been melted and had on cooling assumed fantastic shapes. Right beneath the engine was the bonnet and a portmanteau belonging to a gentleman residing in Coventry Road, Guildford. He was 37 years of age.

Inspector Cook said: I found on the body £4 in gold, 10s. 6d. in silver, 4d. in copper, a gold watch and gold chain, and other articles, and also a copy of *Tit Bits*, dated October 29th.

JAMES JACK ANDERSON.

Mr. John C. Lorie, of Hartfield, Dundee, said: I have been at London, and I have been with my friend of James Jack Anderson, aged 45, of Rowan Cottage, Barry, near Carbonnie, N.B.

Inspector Cook said: I found on the body in a letter addressed "8, Panmure Street, Dundee," copies of *Tit Bits, Pearson's Weekly, Answers, Great Thoughts, The Christian World, Life Sloper*, £1 in gold, 15s. 6d. in silver, a halfpenny in copper, silver watch, gold albert, &c.

JOHN ROWELL HILL.

Mr. Hugh Mitchell, solicitor and bank agent, Pitlochry, said: I have been shown a body which I identify as that of my son, Duncan Alexander McLeod. He was a clerk in the 42nd Regiment, and was thirty years of age.

Inspector Cook said: I found on the body £1 10s. in gold, 15s. 6d. in silver, 3d. in copper, a gold ring, turquoise breast pin, Waterbury watch, &c.

DUNCAN ALEX. M'LEOD.

General Sir John McLeod, Warriston Lodge, Edinburgh, said: I have been shown a body which I identify as that of my son, Duncan Alexander McLeod. He was a captain in the 42nd Regiment, and was thirty years of age.

Inspector Cook said: I found on the body £1 10s. in gold, 15s. 6d. in silver, 3d. in copper, a gold ring, turquoise breast pin, Waterbury watch, &c.

GEORGE PICKERING.

Mr. Thomas Pickering, Middlesbrough, said: I am a railway goods agent. I have seen the body of George Pickering, 17 Carey Street, Middlesbrough. He was a railway goods guard, and was forty years of age.

Inspector Cook said: I found on the body £17 in gold, 3s. 6d. in silver, a penny in copper, purse, and other articles.

CHARLOTTE HAMILTON.

Mr. Archibald Glenn, 70, Bridge End, Dumbarton, said: I am a boot and shoe merchant. A body has been shown to me which I recognise as that of Charlotte Hamilton, aged 5. She was the daughter of George Hamilton, deceased, and Janet McCulloch Hamilton. Her mother is in Sydney, near South Wales. The deceased was going with her uncle and aunt, who were both in the train.

Inspector Cook said: There was nothing on the body but a string on her neck with a coin attached.

Inspector Cook then recorded the evidence of identification of all the bodies which have been recovered.

THE MISSING VICTIM.

The Coroner: Who was travelling in the train with the child?

Witness: Her uncle.

The Coroner: As we have got the witnesses here, we had better take the evidence as far as we can, as we don't know when we may bring them back. You know that with this little girl there were other persons travelling?

Mr. Glenn: There was her uncle, William McCulloch, and her aunt, Ann McCulloch, who was a single woman and about twenty-four years of age.

Inspector Cook: The uncle was travelling with her, and he was in the same carriage. He is now at the Depot Inn close by, and I think he could be brought here very shortly. He will be able to speak to identity.

Wm. McCulloch, one of the survivors, who is invalided at the Depot Inn, was then brought into the room. His head was bandaged up, there was a cut on his right jaw, bruises about his face, and he showed every sign of having been severely shaken. He said: I live at Alexandria, Dumbarton, and am a painter. I was travelling in the train on November 1st.

The Coroner: Do you remember a certain occurrence taking place? It was the time when we smashed up.

Witness: Yes.

The Coroner: Who was in the carriage at the time?

Witness: My sister and my little niece. My sister's name was Annie McCulloch, and my niece's was Lottie Hamilton.

The Coroner: Any one else?—No, sir.

How old was your sister Ann?—Twenty-three or twenty-four.

Was she unmarried?—Yes.

Have you seen or heard anything of her since?—No, sir.

Did you see her after this collision took place?—I did not.

Was there any one else in the carriage?—There were only our two selves.

The Coroner: I think that is as far as we can go to-day.

Inspector Cook: That is the only body which has been reported to me as not yet recovered.

Deputy Chief-Constable Hutchinson: There was a Mrs. McKenzie present.

Inspector Cook: I can only speak of what has been reported to me.

Deputy Chief-Constable Hutchinson: There is a report to the effect that Mrs. McKenzie is in Canada, and is coming—from what source I don't know.

The Coroner: All we can do is to hold inquests over bodies, not over remains of bodies. I think we have got as far as we can at present go. I think you are all men of business, and perhaps it would be more convenient for all that we should hold the adjourned inquest in the town.

A Juror said it would be more convenient to do so.

THE FUTURE OF THE INQUIRY.

Inspector Cook: I want to make an application to you, sir, with regard to the property found on the bodies—Newcastle, Durham, and Thirsk—that it may be in my possession till the close of this inquiry. I merely wish for your instructions.

The Coroner: You will have some difficulty in returning it afterwards. You have the relatives here, and I think you had better retain it in your custody.

THE ADJOURNMENT.

After some discussion between the coroner and the jury, it was decided that the inquiry should be adjourned for a fortnight, the coroner mentioning that he believed the Court House would be placed at their disposal.

The inquiry, accordingly, was then adjourned till the 17th inst. at two o'clock.

The jury then entered a special saloon train, which had been provided by the railway company, and proceeded to view the scene of the accident.

THE EXPRESS GUARD'S STORY.

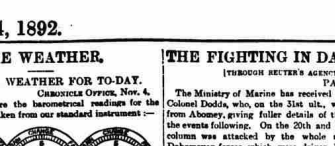
Excepting that he was badly shaken the guard of the express train, George Bean, escaped without injury, and he was on the spot early on the morrow, giving evidence and aid to the injured and otherwise giving assistance before proceeding to his home at York. Late in the afternoon he was interviewed at his residence, 15, Fixby Street, York, and he then had the benefit of a few hours' sleep, but he still appeared to be suffering from the severe shaking to which he had been subjected. Bean, who is a smart, intelligent man of probably between 30 and 40, has been in the employ of the North-Eastern Railway Company for about 14 years, during the last five of which he has been a guard. He in the course of his evidence stated that the second train—or technically speaking the second portion of the train—of which he was the guard, consisted of seven certificated passenger vans, a Pullman car, a horse box, and three vans. This was what is called the relief train, which was put on to relieve the up train, which had left Edinburgh on Tuesday at 9.30 p.m. train from Edinburgh as from Tuesday, the 1st of the month, the train in question, which followed the ordinary train, a man named Wimpress acted as conductor, a position which he had filled in connexion with the Edinburgh 9.30 train. Wimpress, according to Bean, had a marvellous escape. As far as Darlington he travelled in the brake van, but on reaching the latter place he changed into the middle van, and thus escaped what would probably have been certain death. The train, Bean continued, left Darlington at 3.39 and kept up to about the ordinary time, never having a board against either signal or distant signal. It was a moonlight night, but the mist was variable, for while in some places the air was comparatively clear, in others the fog was so thick that he could scarcely see your hand before you. He was not exactly say what speed we should be travelling, but I should say it was from 50 to 60 miles an hour. This would probably be the rate at which we were going when the collision happened. So sudden was the shock that I had no time to get on the brake. When near Manor House Junction I felt a terrible shock, and before I had time to realise what had happened I was thrown violently against the brake. In the van were a number of parcel post hampers and some mail bags, which I had placed against them to be ready to put out at York. These barrels came flying right against the brake and jammed me between it and the door. I was stunned for the moment, but as soon as possible I pulled myself together, and just managed to open the door sufficiently to squeeze myself out. Immediately it flashed through my mind that the mail train due out of York at 3-35 would come on running along, and having relighted my lamp I made my way towards the signal-box, noticing on the way that a North British waggon containing flax had been knocked a hundred yards off the line, and that three horses—these with my van being at the rear of the train—appeared to be the only three vehicles standing intact. On my way to the signal-cabin I saw the driver of the goods train. "Good God," he said, "what's the place?" I said I was not quite certain, but I knew to be my duty in such a case, I started off along the line for the Thirsk Avenue signalman's cabin, running and waving my lamp the whole distance of two miles, my object being to protect the down mails. On my arrival I found that the line had been blocked, according to instructions, and the first train was drawn up under the signal-box. Along with a Leeds guard, I returned to Manor House Junction, alarmed to find that the train was ablaze. We assisted in the mournful task of removing the dead and relieving the injured, some of whom we placed on couches made from the cushions of the Pullman car. There were many pitiable sights which I can never forget. Bean stated in addition that for the Pullman car, which cushioned the force of the impact on the rear of the train, nearly every body in the express would have been killed.

THE WEATHER.

PROBABLE WEATHER FOR TO-DAY.

CHRONICLE OFFICE, NOV. 4.

The following are the barometrical readings for the past 24 hours, as taken from our standard instrument:—



Yesterday, at 5 a.m. — Last night, at 6 p.m. — This morning, 1 a.m.—Steady.

The fall in the barometer was checked about eight o'clock yesterday morning, and afterwards it ascended sharply. The weather, which had previously been of a rainy character, improved rapidly, and the greater portion of the day was fine, and bright. Temperature was high for the season, the lowest and the mean reading of the day being highers of 119, George Street, Edinburgh.

Inspector Cook said: I found on the body a third-class insurance ticket issued at Edinburgh, by the East Coast and North British Railway, with the deceased's name written across it. There was on the body one £1 Bank of Scotland note, £3 10s in gold, £1 10s in silver, 1s 1½d in copper, silver watch, Murray's "Edinburgh Diary," &c.

DUNCAN ALEX. M'LEOD.

General Sir John McLeod, Warriston Lodge, Edinburgh, said: I have been shown a body which I identify as that of my son, Duncan Alexander McLeod. He was a captain in the 42nd Regiment, and was thirty years of age.

Inspector Cook said: I found on the body £1 10s. in gold, 15s. 6d. in silver, 3d. in copper, a gold ring, turquoise breast pin, Waterbury watch, &c.

GEORGE PICKERING.

Mr. Thomas Pickering, Middlesbrough, said: I am a railway goods agent. I have seen the body of George Pickering, 17 Carey Street, Middlesbrough. He was a railway goods guard, and was forty years of age.

Inspector Cook said: I found on the body £17 in gold, 3s. 6d. in silver, a penny in copper, purse, and other articles.

CHARLOTTE HAMILTON.

Mr. Archibald Glenn, 70, Bridge End, Dumbarton, said: I am a boot and shoe merchant. A body has been shown to me which I recognise as that of Charlotte Hamilton, aged 5. She was the daughter of George Hamilton, deceased, and Janet McCulloch Hamilton. Her mother is in Sydney, near South Wales. The deceased was going with her uncle and aunt, who were both in the train.

Inspector Cook said: There was nothing on the body but a string on her neck with a coin attached.

Inspector Cook then recorded the evidence of identification of all the bodies which have been recovered.

THE MISSING VICTIM.

The Coroner: Who was travelling in the train with the child?

Witness: Her uncle.

The Coroner: As we have got the witnesses here, we had better take the evidence as far as we can, as we don't know when we may bring them back. You know that with this little girl there were other persons travelling?

Mr. Glenn: There was her uncle, William McCulloch, and her aunt, Ann McCulloch, who was a single woman and about twenty-four years of age.

Inspector Cook: The uncle was travelling with her, and he was in the same carriage. He is now at the Depot Inn close by, and I think he could be brought here very shortly. He will be able to speak to identity.

Wm. McCulloch, one of the survivors, who is invalided at the Depot Inn, was then brought into the room. His head was bandaged up, there was a cut on his right jaw, bruises about his face, and he showed every sign of having been severely shaken. He said: I live at Alexandria, Dumbarton, and am a painter. I was travelling in the train on November 1st.

The Coroner: Do you remember a certain occurrence taking place? It was the time when we smashed up.

Witness: Yes.

The Coroner: Who was in the carriage at the time?

Witness: My sister and my little niece. My sister's name was Annie McCulloch, and my niece's was Lottie Hamilton.

The Coroner: Any one else?—No, sir.

How old was your sister Ann?—Twenty-three or twenty-four.

Was she unmarried?—Yes.

Have you seen or heard anything of her since?—No, sir.

Did you see her after this collision took place?—I did not.

Was there any one else in the carriage?—There were only our two selves.

The Coroner: I think that is as far as we can go to-day.

Inspector Cook: That is the only body which has been reported to me as not yet recovered.

Deputy Chief-Constable Hutchinson: There was a Mrs. McKenzie present.

Inspector Cook: I can only speak of what has been reported to me.

Deputy Chief-Constable Hutchinson: There is a report to the effect that Mrs. McKenzie is in Canada, and is coming—from what source I don't know.

The Coroner: All we can do is to hold inquests over bodies, not over remains of bodies. I think we have got as far as we can at present go. I think you are all men of business, and perhaps it would be more convenient for all that we should hold the adjourned inquest in the town.

A Juror said it would be more convenient to do so.

THE FUTURE OF THE INQUIRY.

Inspector Cook: I want to make an application to you, sir, with regard to the property found on the bodies—Newcastle, Durham, and Thirsk—that it may be in my possession till the close of this inquiry. I merely wish for your instructions.

The Coroner: You will have some difficulty in returning it afterwards. You have the relatives here, and I think you had better retain it in your custody.

THE ADJOURNMENT.

After some discussion between the coroner and the jury, it was decided that the inquiry should be adjourned for a fortnight, the coroner mentioning that he believed the Court House would be placed at their disposal.

The inquiry, accordingly, was then adjourned till the 17th inst. at two o'clock.

The jury then entered a special saloon train, which had been provided by the railway company, and proceeded to view the scene of the accident.

THE EXPRESS GUARD'S STORY.

Excepting that he was badly shaken the guard of the express train, George Bean, escaped without injury, and he was on the spot early on the morrow, giving evidence and aid to the injured and otherwise giving assistance before proceeding to his home at York. Late in the afternoon he was interviewed at his residence, 15, Fixby Street, York, and he then had the benefit of a few hours' sleep, but he still appeared to be suffering from the severe shaking to which he had been subjected. Bean, who is a smart, intelligent man of probably between 30 and 40, has been in the employ of the North-Eastern Railway Company for about 14 years, during the last five of which he has been a guard. He in the course of his evidence stated that the second train—or technically speaking the second portion of the train—of which he was the guard, consisted of seven certificated passenger vans, a Pullman car, a horse box, and three vans. This was what is called the relief train, which was put on to relieve the up train, which had left Edinburgh on Tuesday at 9.30 p.m. train from Edinburgh as from Tuesday, the 1st of the month, the train in question, which followed the ordinary train, a man named Wimpress acted as conductor, a position which he had filled in connexion with the Edinburgh 9.30 train. Wimpress, according to Bean, had a marvellous escape. As far as Darlington he travelled in the brake van, but on reaching the latter place he changed into the middle van, and thus escaped what would probably have been certain death. The train, Bean continued, left Darlington at 3.39 and kept up to about the ordinary time, never having a board against either signal or distant signal. It was a moonlight night, but the mist was variable, for while in some places the air was comparatively clear, in others the fog was so thick that you could scarcely see your hand before you. He was not exactly say what speed we should be travelling, but I should say it was from 50 to 60 miles an hour. This would probably be the rate at which we were going when the collision happened. So sudden was the shock that I had no time to get on the brake. When near Manor House Junction I felt a terrible shock, and before I had time to realise what had happened I was thrown violently against the brake. In the van were a number of parcel post hampers and some mail bags, which I had placed against them to be ready to put out at York. These barrels came flying right against the brake and jammed me between it and the door. I was stunned for the moment, but as soon as possible I pulled myself together, and just managed to open the door sufficiently to squeeze myself out. Immediately it flashed through my mind that the mail train due out of York at 3-35 would come on running along, and having relighted my lamp I made my way towards the signal-box, noticing on the way that a North British waggon containing flax had been knocked a hundred yards off the line, and that three horses—these with my van being at the rear of the train—appeared to be the only three vehicles standing intact. On my way to the signal-cabin I saw the driver of the goods train. "God God," he said, "what's the place?" I said I was not quite certain, but I knew to be my duty in such a case, I started off along the line for the Thirsk Avenue signalman's cabin, running and waving my lamp the whole distance of two miles, my object being to protect the down mails. On my arrival I found that the line had been blocked, according to instructions, and the first train was drawn up under the signal-box. Along with a Leeds guard, I returned to Manor House Junction, alarmed to find that the train was ablaze. We assisted in the mournful task of removing the dead and relieving the injured, some of whom we placed on couches made from the cushions of the Pullman car. There were many pitiable sights which I can never forget. Bean stated in addition that for the Pullman car, which cushioned the force of the impact on the rear of the train, nearly every body in the express would have been killed.

LARGE ORDER FOR CUMBERLAND STEEL.

It was reported on Birmingham Exchange yesterday that the competition for a large order for steel rails through a London mercantile house had resulted in the success of one of the leading firms in the Cumberland district. Though the destination of the steel did not transpire, it was generally understood it is intended to be delivered to be for foreign railways, and the magnitude of the contracts will impart renewed activity to the West Cumberland district, which has been for some time past being between English and foreign steelmakers, the tender leaves but a narrow margin of profit.

LIVERPOOL CORN.

LIVERPOOL, Nov. 3.

Wheat on the spot is firmly held, but with only a quiet demand from millers, no quotable change can be made in values. Forward deliveries of Californian are firm, and an advance of about 1d has been paid, while red American distant positions were a moderate speculative demand at fully 1d per central over yesterday's final values. Indian corn is firmly held for prompt and forward delivery, to 2d per 100lbs. Red American: November, 5s 9½d; December, 5s 10d; January, 5s 10½d; February, 5s 10½d. Spot parcels of American mixed Indian corn meet only a slow consumptive demand, and prices again favour buyers to the extent of 2d per 100lbs. Quotations quoted 5s 5d to 5s 6d per 100lbs. Forward deliveries of American mixed Indian corn are firmly held, and values show little variation from those of last evening. Sales:—American:
